

Feature Spec: AI-Generated Strategic Recommendations Tabs

Overview

Add two new AI-generated recommendation tabs to the evaluation report experience within Compete:

1. **Product Roadmap Suggestions**
2. **Marketing Suggestions**

These tabs will transform raw evaluation insights into actionable strategic recommendations for product and go-to-market teams.

The feature aims to help customers not only understand *how* they compare against competitors, but also determine:

- what they should build next
 - how they should position and market their product more effectively
-

Problem Statement

Current evaluation reports provide users with quantitative and qualitative insights into product performance relative to competitors. However, users must manually interpret:

- what product gaps matter most
- which competitor strengths are strategically important
- how to communicate competitive advantages to customers

This creates friction between evaluation results and business action.

Customers want:

- actionable roadmap recommendations
- prioritized feature ideas
- competitive positioning guidance
- sales enablement insights
- marketing messaging suggestions

Goals

Primary Goals

- Generate AI-powered product roadmap suggestions based on evaluation outcomes
- Generate AI-powered marketing and positioning recommendations
- Help customers convert evaluation results into execution plans
- Increase strategic value of Compete reports

Secondary Goals

- Improve report engagement and retention
 - Make reports useful across multiple teams (Product, Marketing, Sales, Leadership)
 - Differentiate Compete from traditional benchmarking/evals platforms
-

Non-Goals

This feature will NOT:

- Automatically create Jira tickets or roadmap items
 - Replace human product strategy decisions
 - Generate complete marketing campaigns or assets
 - Directly modify customer systems
 - Chatbot interface
-

User Personas

Product Teams

Use roadmap suggestions to:

- identify missing capabilities

- prioritize feature investments
- understand competitor differentiation
- validate roadmap direction

Marketing Teams

Use marketing suggestions to:

- improve product positioning
- strengthen messaging
- identify competitor weaknesses to exploit
- create sales enablement narratives

Leadership / Strategy Teams

Use both tabs to:

- understand strategic risks
 - align product and GTM strategy
 - identify investment opportunities
-

Feature Description

1. Product Roadmap Suggestions Tab

Description

An AI-generated recommendations tab that analyzes evaluation results and suggests product improvements, features, or strategic roadmap investments.

Inputs

The AI system may use:

- evaluation scores
- competitor comparisons
- failed prompts/workflows
- prompt categories/taxonomy
- qualitative model outputs

- feature coverage gaps
- workflow success rates
- hallucination/failure analysis
- customer-defined priorities (future enhancement)

Outputs

The tab should generate:

- feature recommendations
- workflow improvement suggestions
- infrastructure/performance recommendations
- prioritization rationale
- competitor parity gaps
- strategic differentiation opportunities

Example Suggestions

- “Improve citation grounding for legal research workflows where competitor X consistently outperformed.”
- “Add multi-document reasoning support for contract review tasks.”
- “Invest in response latency optimization for long-context prompts.”
- “Introduce workflow memory persistence for multi-step agent tasks.”

Suggested Recommendation Structure

Each recommendation should include:

- title
- description
- rationale
- impacted eval category
- supporting evidence from report
- estimated strategic impact
- competitor reference(s)

Potential Prioritization Labels

- High Impact
 - Medium Impact
 - Low Effort
 - Competitive Risk
 - Strategic Differentiator
-

2. Marketing Suggestions Tab

Description

An AI-generated recommendations tab focused on helping marketing and sales teams better position the product using insights from evaluation results.

Inputs

The AI system may use:

- evaluation strengths
- competitor weaknesses
- benchmark deltas
- winning workflow categories
- latency/cost/performance metrics
- qualitative output quality
- reliability metrics

Outputs

The tab should generate:

- positioning recommendations
- messaging angles
- competitive differentiation narratives
- sales enablement ideas
- feature promotion opportunities
- customer pain point messaging
- suggested proof points

Example Suggestions

- “Position the product as the leader in multi-step legal reasoning workflows.”
- “Highlight superior citation accuracy versus competitor X in enterprise marketing materials.”
- “Create case studies around long-context document analysis performance.”
- “Equip sales teams with benchmark statistics for contract redlining tasks.”

Suggested Recommendation Structure

Each recommendation should include:

- title

- recommendation summary
- supporting eval evidence
- target audience/team
- competitor reference(s)
- suggested messaging angle
- confidence level

Potential Categories

- Product Positioning
 - Sales Enablement
 - Competitive Messaging
 - Customer Acquisition
 - Enterprise Differentiation
 - Brand Narrative
-

User Experience

Report Navigation

The report page will contain:

- Overview
- Detailed Results
- Product Roadmap Suggestions
- Marketing Suggestions

Tab Behavior

- Tabs load after eval report generation completes
 - Recommendations may stream progressively
 - Users can:
 - expand/collapse recommendations
 - copy recommendations
 - export recommendations
 - regenerate recommendations
-

AI Generation Flow

High-Level Flow

1. Eval report is completed
 2. Relevant report data is aggregated
 3. Structured context is sent to recommendation generation pipeline
 4. AI generates:
 - product roadmap recommendations
 - marketing recommendations
 5. Results are stored and rendered in report tabs
-

Recommendation Generation Logic

Product Suggestions Logic

The AI should prioritize:

- recurring workflow failures
- large competitive gaps
- high-value customer workflows
- strategic missing capabilities
- patterns across prompt categories

Marketing Suggestions Logic

The AI should prioritize:

- strongest benchmark wins
 - statistically significant advantages
 - competitor weaknesses
 - differentiating workflow strengths
 - enterprise-relevant proof points
-

Data Requirements

Required Inputs

- Eval scores
- Competitor metadata
- Workflow taxonomy
- Prompt categories
- Output quality analysis
- Failure analysis
- Benchmark metrics

Optional Future Inputs

- Customer ICP/persona
 - Customer industry
 - Existing product roadmap
 - Existing positioning/messaging
 - Customer strategic priorities
-

API / Backend Considerations

New Recommendation Generation Service

Potential endpoint:

`POST /reports/{report_id}/recommendations`

Response Structure

```
{  
  "product_recommendations": [],  
  "marketing_recommendations": []  
}
```

Storage

Recommendations should be persisted alongside report metadata for:

- regeneration
- exports
- analytics

- auditability
-

UI Considerations

Recommendation Cards

Each recommendation displayed as a card containing:

- title
- category
- recommendation details
- supporting evidence
- impact level
- competitor references

Additional UI Features

- filtering by category
 - sorting by impact/confidence
 - export to PDF/CSV
 - “regenerate suggestions” button
 - inline evidence references
-

Risks & Challenges

Hallucinated Recommendations

AI may generate suggestions unsupported by evaluation data.

Mitigation

- require evidence references
 - constrain prompts to eval context
 - include confidence scoring
-

Generic Recommendations

Suggestions may become repetitive or overly broad.

Mitigation

- include benchmark-specific context
 - include competitor-specific data
 - use structured prompting
-

Strategic Misalignment

Generated suggestions may not align with customer business priorities.

Mitigation

Future enhancement:

- allow customers to input strategic goals and weighting
-

Success Metrics

Engagement Metrics

- % of users opening recommendation tabs
- time spent in recommendation tabs
- export/share rate

Product Metrics

- recommendation regeneration rate
- customer satisfaction feedback
- retention uplift

Business Metrics

- increased perceived platform value
 - expansion into product/marketing orgs
 - improved competitive differentiation for Compete
-

Future Enhancements

Product Roadmap Suggestions

- roadmap prioritization scoring
- Jira/Linear integration
- feature clustering
- engineering effort estimation

Marketing Suggestions

- auto-generated battlecards
- campaign suggestions
- landing page copy recommendations
- sales pitch generation
- persona-specific messaging

Cross-Functional Enhancements

- collaborative commenting
 - approval workflows
 - recommendation history tracking
 - recommendation feedback loops
-

Open Questions

- Should recommendations be generated immediately or asynchronously?
- Should users be able to regenerate recommendations with different focuses?
- How much explainability/evidence should be exposed?
- Should recommendations be customizable by business objective?
- Should recommendations be exportable into external tools?

- How should recommendation quality be evaluated internally?
-

Summary

This feature adds two AI-powered strategic recommendation tabs to Compete reports:

- Product Roadmap Suggestions
- Marketing Suggestions

The feature transforms evaluation reports from passive benchmarking artifacts into actionable strategic guidance for product, marketing, sales, and leadership teams.
